

'Don't Tell the Cooks, They Already Know'

Our kitchen display software offers the Quick Service and Fast Casual industry everything they need for instant order notification and expedited preparation of your food orders.

Orders can be sent to the preparation monitors on-the-fly, with a touch of button or at the end of the sale. They are sent color coded to your custom settings in simple and easy to read font with exact details.

Display options are set based on configurations that work best for your store such as number of screen grids, custom color and hi-light areas and order arrival tone notification. It also includes many other helpful tools that will greatly increase your food order prep time and accuracy such as target times, summary screens and more.

Our Kitchen Display software works seamlessly with the POS module and is downloadable from our website www.possystemsconsulting.com Just download it, call **888.295.2166** to obtain a license and it's ready to use with your Logic Controls 3000 series Kitchen Display System.
